NOMINUM® N2™ SECURE BUSINESS

A Security as a Service (SECaaS) offering for every customer, everywhere, on every device.

Over 50 percent of all small businesses report that they've been victims of a cyberattack, according to the Small Business Innovation Research (SBIR) program. These attacks are costly. Not only do businesses need to pay a fee to recover their files if attacked by ransomware, they also lose access to the everyday systems upon which they rely. In 2013, cyberattacks cost SMBs on average \$8,699 per attack; today, attacks cost small businesses \$20,752 per attack on average, per SBIR. And 60 percent of small businesses attacked end up going out of business (SBIR). The need for advanced yet easy-to-use cybersecurity solutions has never been greater.

Nominum N2 Secure Business provides enforcement of content policy and state-of-the-art threat protection with unequaled simplicity. Delivered as a seamless part of a provider's internet service, it is easy for providers and their subscribers to manage, yet provides comprehensive visibility, control and protection for all internet-connected devices. Service options range from simple content filtering and parental controls to multi-layered, defense-in-depth features that protect from a broad range of the latest malicious internet threats including ransomware, botnets, phishing and zero-day malware attacks.

Safeguard businesses with enterprise-grade protection

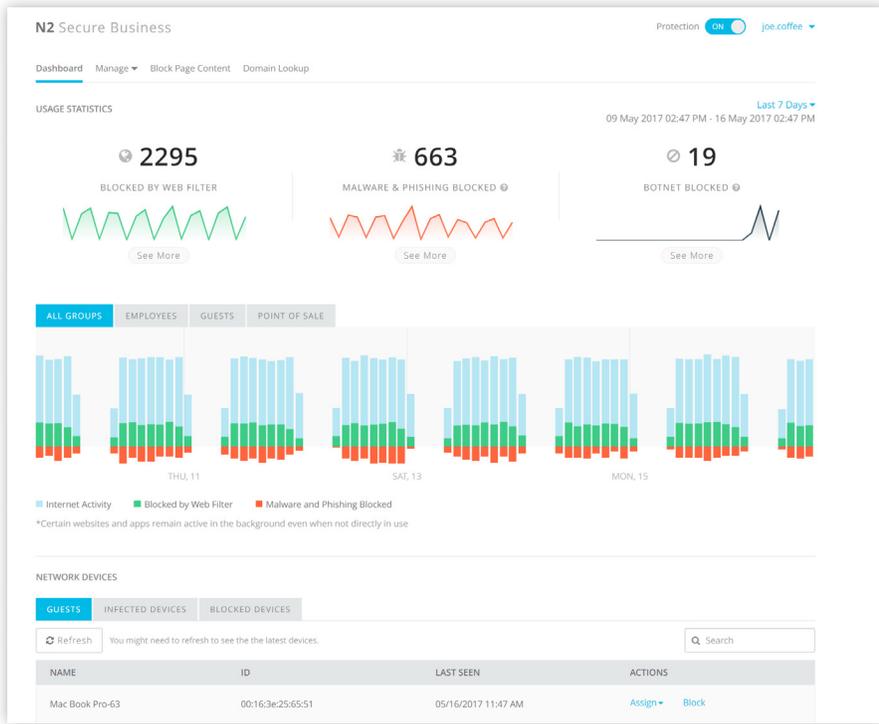

Nominum Data Science uses advanced techniques to identify malicious sites, blocking almost 100,000 queries daily to protect businesses from threats. At the same time, good traffic is allowed so businesses and their employees have safe, reliable online access 24x7 with no complex configurations or IT resources required.

Business customers can block and allow content based on employee needs, location and role while enabling malware and phishing protection with one click. This protects employees from unwanted content by allowing only sites and categories that are considered appropriate.

N2 Secure Business is a Security as a Service offering to protect businesses from ransomware, phishing, botnets and zero-day malware attacks.

KEY HIGHLIGHTS

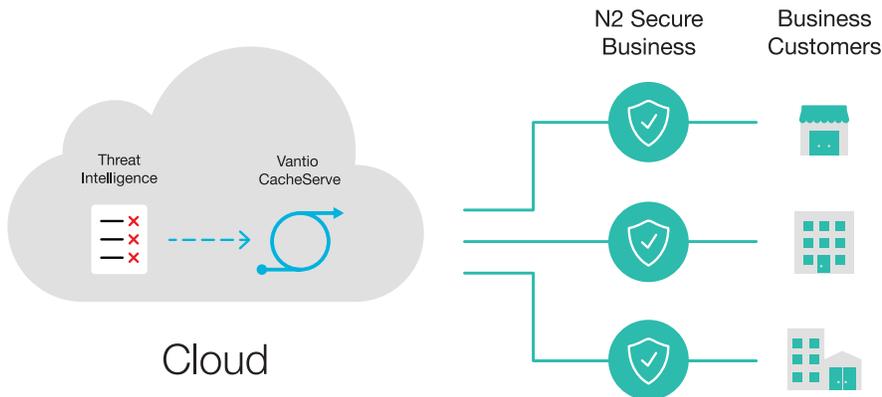

- Protects against threats like phishing, ransomware and other malware.
- Backed by Nominum Data Science, which analyzes 100 billion DNS queries daily to avert cyberthreats.
- Quick and easy to launch.
- Enables tailored access for different employee roles.
- Simple administration console allows businesses to make profile and content access changes any time.
- Blocks inappropriate and malicious content, powered by real-time data science threat intelligence streams.
- Provides "traffic control" for high bandwidth consuming services like videos and file sharing.

A drillable dashboard shows all malware blocked. This “accessible-anywhere” launchpad lets business owners add devices, create profiles and tweak settings at any time.

Cloud deployment options allow for rapid time to market

With N2 Secure Business, providers can leverage their existing network infrastructure to offer SMBs cloud protection or host the solution in the Nominum cloud. As a white label solution, providers control the branding and own the data so they can develop deeper and more profitable relationships with their business customers while providing highly effective and cost-effective cyberthreat protection.

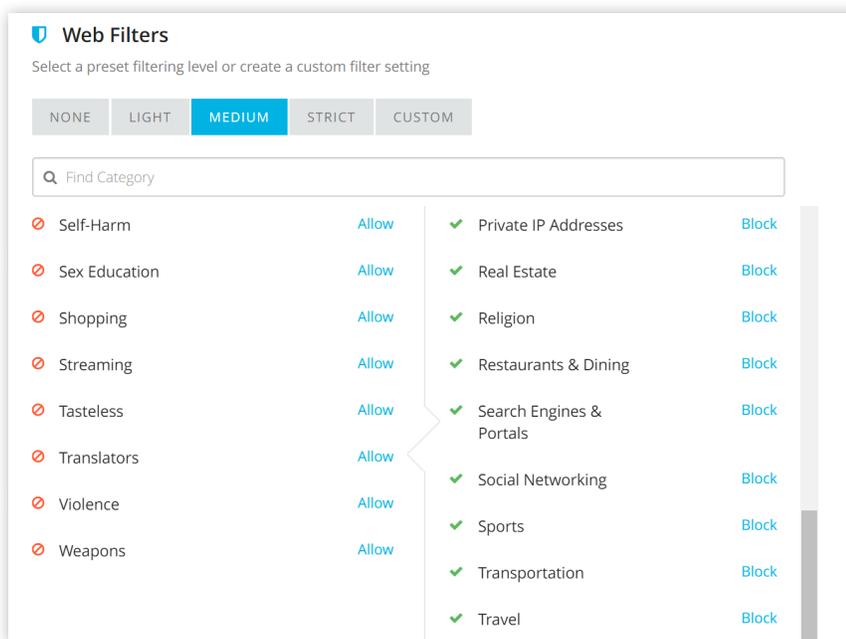

Providers can deploy N2 Secure Business within their own network or through the Nominum cloud.

Let business owners easily tweak internet content settings

An easy-to-use control panel lets organizations block pre-populated content categories such as social media, gambling, pornography and streaming services. Light, medium or strict content filtering settings automatically include content category filtering. For those desiring more granular control, specific sites can be blocked and allowed.

Nominum maintains one of the world's most accurate and extensive URL databases for filtering, with millions of categorized URLs. Pre-populated categories are continually updated by Nominum to ensure emerging sites are appropriately categorized and automatically blocked.

A control panel lets businesses easily establish employee profiles with pre-populated content restrictions.

ABOUT NOMINUM

Nominum provides an integrated suite of carrier-grade DNS-based cloud solutions that enable fixed and mobile operators to enhance and protect their networks, strengthen security for consumers and business subscribers, and offer innovative value-added services. The result is improved service agility, increased revenue, greater brand loyalty and a strong competitive advantage. More than 130 providers in over 40 countries use Nominum software.
