

**NOMINUM® N2™
SECURE PUBLIC WI-FI**

Protect Wi-Fi from inappropriate and unsafe content

N2 Secure Public Wi-Fi is a Security as a Service offering that service providers can supply to their business customers. It blocks inappropriate and unsafe content on the internet, simply and effectively. Delivered as a seamless part of a provider's internet service, it is easy for providers and their subscribers to manage, yet provides comprehensive control and protection for all internet-connected devices.

Cloud deployment options allow for rapid time to market

With N2 Secure Public Wi-Fi, providers can leverage their existing network infrastructure or host the solution in the Nominum cloud. As a white label solution, providers control the branding and own the data so they can develop deeper and more profitable relationships with their business customers while providing valuable internet protection.

N2 Secure Public Wi-Fi is a Security as a Service offering that enables providers to supply cyberthreat protection and content filtering for businesses.

KEY HIGHLIGHTS

- Quick and easy to launch with multiple deployment options for providers.
- Blocks inappropriate content for guest internet users.
- Lets businesses customize block pages to reflect the host's brand and values.
- Allows traffic optimization from bandwidth-consuming services like videos and file sharing.
- Organizations can enable safe search on Google or YouTube to ensure inappropriate content is filtered.
- Protects guests from malware, ransomware and other malicious content.

Preserve the brand reputation of your business customers

Guest or public Wi-Fi is a must-have for many businesses, but it comes with responsibility and risks. As guests use internet services, the last thing businesses want is for them to be exposed to inappropriate or illegal content, which can impact an organization's reputation, revenue and likelihood of customers returning.

With N2 Secure Public Wi-Fi, any user attempting to access restricted websites will be shown a blocked page notification that businesses can brand and message as they see fit.

Easily and quickly tweak content filter settings

Businesses are firmly in control of content that can be accessed via the internet. With N2 Secure Public Wi-Fi, those providing Wi-Fi services can select from light, medium or strict content filtering, block specific categories and even select specific sites to block and allow. An easy-to-use interface contains pre-populated content categories that can be blocked, such as social media, gambling, pornography and streaming services.

Nominum maintains one of the world's most accurate and extensive URL databases for filtering, with millions of categorized domains. Pre-populated categories are continually updated to ensure emerging sites are appropriately categorized and automatically blocked.

Businesses can select categories to block that reflect their preferences and brand identity.

Give business guests an optimized web browsing experience

Businesses can rest assured their guests are safe from objectionable and illegal content with N2 Secure Public Wi-Fi. Content settings can be tweaked at any time for any demographic. For example, more rigid content filters can be set for children, while looser content restrictions can be applied for adults. With options to block streaming and file sharing sites, businesses can also minimize bandwidth issues and allow more of their customers to connect.

Protect guests from malicious content

Security is paramount for any business and N2 Secure Public Wi-Fi can defend users against security threats while providing safe and non-disruptive service. Protection from phishing, viruses, spyware, adware and malware comes in the form of fine-tuned filtering that blocks bad traffic while allowing good traffic. This provides businesses with both brand protection and assurance that guests have the best web-surfing experience possible.

ABOUT NOMINUM

Nominum provides an integrated suite of carrier-grade DNS-based cloud solutions that enable fixed and mobile operators to enhance and protect their networks, strengthen security for consumers and business subscribers, and offer innovative value-added services. The result is improved service agility, increased revenue, greater brand loyalty and a strong competitive advantage. More than 130 providers in over 40 countries use Nominum software.
